This is the $x-t$ graph of the motion of a particle. Of the four points $P$, $Q$, $R$, and $S$, the velocity $v_x$ is greatest (most positive) at

A. point $P$.  
B. point $Q$.  
C. point $R$.  
D. point $S$.  
E. not enough information in the graph to decide
Q2.2

This is the \( x-t \) graph of the motion of a particle. Of the four points \( P, Q, R, \) and \( S, \) the speed is greatest at

A. point \( P. \)    B. point \( Q. \)    C. point \( R. \)    D. point \( S. \)    E. not enough information in the graph to decide
Q2.3

This is the $x$–$t$ graph of the motion of a particle. Of the four points $P$, $Q$, $R$, and $S$, the acceleration $a_x$ is greatest (most positive) at

A. point $P$.  
B. point $Q$.  
C. point $R$.  
D. point $S$.  
E. not enough information in the graph to decide.
You toss a ball straight upward, in the positive direction. The ball falls freely under the influence of gravity.

At the highest point in the ball’s motion,

A. its velocity is zero and its acceleration is zero.
B. its velocity is zero and its acceleration is positive (upward).
C. its velocity is zero and its acceleration is negative (downward).
D. its velocity is positive (upward) and its acceleration is zero.
E. its velocity is positive (upward) and its acceleration is zero.
Q2.5

This is a motion diagram of an object moving along the $x$–direction with constant acceleration. The dots 1, 2, 3, … show the position of the object at equal time intervals $\Delta t$.

At the time labeled 3, what are the signs of the object’s velocity $v_x$ and acceleration $a_x$?

A. $v_x < 0, a_x = 0$  
B. $v_x < 0, a_x > 0$

C. $v_x < 0, a_x < 0$  
D. $v_x > 0, a_x > 0$

E. $v_x > 0, a_x < 0$
Q2.6

This is a motion diagram of an object moving along the \( x \)-direction with constant acceleration. The dots 1, 2, 3, … show the position of the object at equal time intervals \( \Delta t \).

Which of the following \( v_x-t \) graphs best matches the motion shown in the motion diagram?

A.  
B.  
C.  
D.  
E.
This is a motion diagram of an object moving along the $x$–direction with constant acceleration. The dots 1, 2, 3, … show the position of the object at equal time intervals $\Delta t$.

Which of the following $a_x$–$t$ graphs best matches the motion shown in the motion diagram?

A.  

B.  

C.  

D.  

E.

An object moves along the $x$–axis with constant acceleration. The initial position $x_0$ is positive, the initial velocity is negative, and the acceleration is positive.

Which of the following $v_x$–$t$ graphs best describes this motion?
This is the $v_x-t$ graph for an object moving along the $x$-axis.

Which of the following descriptions of the motion is most accurate?

A. The object is slowing down at a decreasing rate.
B. The object is slowing down at an increasing rate.
C. The object is speeding up at a decreasing rate.
D. The object is speeding up at an increasing rate.
E. The object’s speed is changing at a steady rate.
Q2.10

You are given the $v_x-t$ graph for an object moving along the $x$-axis with constant acceleration. Which of the following could you **not** determine from the information given in this graph alone?

A. the object’s $x$–acceleration at any time $t$
B. the object’s $x$–velocity at any time $t$
C. the object’s position at any time $t$
D. more than one of the above
E. misleading question — you could determine all of these from the $v_x-t$ graph alone
Q2.11

The position of an object moving along the x-axis is given by

\[ x = 5.0 \text{ m} - (4.0 \text{ m/s})t + (2.0 \text{ m/s}^2)t^2 \]

Which statement about this object is correct?

A. For \( t > 0 \), the object is never at rest.

B. The object is at rest at \( t = 0.5 \text{ s} \).

C. The object is at rest at \( t = 1.0 \text{ s} \).

D. The object is at rest at \( t = 2.0 \text{ s} \).

E. More than one of B., C., and D. is correct.
Q2.12

The position of an object moving along the $x$-axis is given by

$$x = 5.0 \text{ m} - (4.0 \text{ m/s})t + (2.0 \text{ m/s}^2)t^2$$

How many times does this object pass through the point $x = 0$?

A. twice, first moving in the positive $x$-direction, then moving in the negative $x$-direction

B. twice, first moving in the negative $x$-direction, then moving in the positive $x$-direction

C. only once, moving in the positive $x$-direction

D. only once, moving in the negative $x$-direction

E. never
